Agenda

- Embedded Systems & KVM
- Status
- To Do

Embedded Systems

- How is embedded different?
 - Fixed function devices– not general purpose
 - Huge variety of hardware platforms
 - No standard platforms (no BIOS, ACPI, UEFI)
 - Real time constraints
 - Large variety of operating systems
 - VDC Research (2011 report)
 - About 50% of devices shipped by survey respondents had no formal OS or an in-house developed OS
- Virtualization capabilities that are less important:
 - Dozens or hundreds of VMs
 - Live migration

Status

- e500mc (32-bit) support upstream
 - A few vcpu features still pending
- 64-bit support(e5500) implemented and nearly through review cycle
- SMP support
- Hugetlbfs support
- Generic e500 machine implemented in QEMU
 - QEMU e500 platform now in upstream Linux kernel
 - Device tree is now dynamically generated
- Cleanup / bug fixes
- Freescale IOMMU (PAMU) driver development in process

To Do

- Performance analysis
- e6500 core support
 - LRAT: Logical-to-Real Address Translation
- QEMU gdb stub
- Device assignment / VFIO
 - Datapath Acceleration Architecture (DPAA)
- In-kernel interrupt controller (MPIC)
- Real Time
- Libvirt
- Direct interrupts to VM for pass-through devices
